SUMMARY

Computer Engineering graduate with hands-on experience building web and mobile applications, REST APIs, and cloud integrations. Led development of a teacher-registration platform adopted by Universidad Tecnologica de la Mixteca and used by 100+ educators in its first edition. Built projects using Python, FastAPI, React, Node.js, Flutter, Azure OpenAI, and Azure AI Search. Degree certificate pending university issuance.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C#, Dart
Frameworks: FastAPI, React, Next.js, Node.js, Express, Angular, Laravel, Flutter
Databases and caching: PostgreSQL, MySQL, MongoDB Atlas, Redis, SQLite
Cloud and tools: Microsoft Azure, Azure OpenAI, Azure AI Search, Docker, Git, GitHub, Linux, CI/CD
Methods: REST APIs, event-driven communication, Agile/Scrum, test-driven development, object-oriented programming

PROFESSIONAL EXPERIENCE

Software Engineer | Pandalatec | Aug 2026 - Oct 2026

- Developed Flutter mobile and Laravel web features for TrueFans, a gamified platform connecting fans with influencers, artists, and brands.
- Implemented mobile functionality and user interface improvements in Flutter.
- Integrated Mercado Pago payments between the Flutter application and Laravel backend; tested local development through an HTTPS tunnel.

Full-Stack Developer | UsaLab | Aug 2024 - Mar 2026

- Led development of a teacher-registration platform adopted as an official system by Universidad Tecnologica de la Mixteca in 2025; more than 100 educators enrolled in its first edition.
- Designed modular REST APIs with Python and FastAPI for user registration, course enrollment, and progress tracking.
- Integrated a React/Laravel frontend with a Python backend, replacing a manual enrollment process.
- Delivered features iteratively using usability testing and direct feedback from users.

Technologies: Python, FastAPI, React, Laravel, MySQL, Docker, Git

Full-Stack Developer | Selfish | Jul 2024 - Aug 2024

- Maintained an administrative platform built with React, Node.js, and Leaf PHP; automated recurring internal tasks with scheduled cron jobs.

SELECTED PROJECTS

AI Narrative Adventure Game | Microsoft Agents League @ AI Skills Fest 2026

- Built an adaptive narrative game that generates story scenes in real time based on player decisions.
- Integrated Azure AI Foundry IQ (Azure AI Search) as a knowledge base to ground generated narratives and reduce hallucinations, and connected Azure OpenAI (gpt-4.1-mini) through LangChain-style orchestration.
- Implemented real-time communication between a React frontend and Node.js backend with Socket.IO; stored game sessions and player history in MongoDB Atlas.

Technologies: React, Tailwind CSS, Framer Motion, Node.js, Socket.IO, Azure OpenAI, Azure AI Search, MongoDB Atlas

Clearing | Privacy-Focused Outdoor Exploration App

- Built a mobile web app (PWA) that turns outdoor walks into exploration by revealing map areas as users take photos at different locations.
- Used a locally run Gemma vision model to verify photos; processed images and GPS coordinates through a local backend.

Technologies: Flutter, FastAPI, SQLite, Gemma

PlugCheck | Minecraft Plugin Compatibility Checker

- Built a web tool that checks plugin compatibility with a target Minecraft server version by querying Hangar, Spiget, or Modrinth and returning compatible, incompatible, unknown, or abandoned status.
- Parsed .jar files entirely in the browser so files stay on the user device; sent only extracted metadata to the API. Flags plugins as abandoned when their GitHub repositories show no activity for more than 18 months. Validated the problem with Minecraft server administrators on Reddit.

Technologies: Next.js, TypeScript, REST APIs, Hangar API, Spiget API, Modrinth API

EDUCATION

Computer Engineering | Universidad Tecnologica de la Mixteca | Oaxaca, Mexico | 2021-2026

Professional internship/practice completed; degree conferral pending.

LANGUAGES

Spanish: Native | English: Technical proficiency for reading documentation
